

Speaker 1 01:46

Hey everybody!

Alex is back. He didn't get lost.

I can start connecting, but, uh, I think right now. The most pressing thing is getting ready for real-time insurance. So, you got anything holding you up? Uh, as of right now, uh, staging is done. Um. Just one more thing I have to done.

Speaker 2 02:27

I have to do. Is that Zach one's main not to to basically deploy to any other repo except the production? So, I just need to change the. Deploy file, uh, yamblop file, actually. So, that's what, uh, only left-hand remaining else was done.

Speaker 1 02:53

I don't know how much he's connected with Mike and John girl, uh, yeah. I

Speaker 2 03:01

Have not connected with the JVS and my kit. So, actually, Shiva wants to wants me to deploy that on Friday. So I have did that, and maybe tomorrow, I'll just have a meeting with them and. Let them know how, like, you know, it is done, like, step by step, how I do that?

Yeah, I was just going to give Alex an update so Alex, following route. We had so much fun.

Speaker 3 03:26

I'm hoping a lot of the things that we ran into were issues because we've never deployed anything. L2 uht environment, but we definitely want to give somebody else a chance to know some of you inside. So, that's where we're asking Mike John roll JBS. Can you please deploy real-time insurance to production then?

I'm hoping you all are going to start today or tomorrow on that task. That way, you don't rush it on Friday.

Speaker 1 04:05

The same thing with DC to be pretty good on staging database.

I think that's all that will pass exactly. Something else, but JBS is trying to yeah.

Speaker 3 04:39

Do you think we got good feedback on? This experience.

It's a lot of there's a lot of things that. Someone who's doing it. Just following the one book would not know. Just because they're not being easy. It's just that some things that you don't like. Like, knowing how to read the application form and understanding that okay if it has production data, even if they say they could give, you

Speaker 1 05:14

Know, someone who's following that would not be able to correct that mistake talking about

some parts?

Speaker 3 05:30

I also need to get it done because JBS.

And just to specify exactly. They need to end, or maybe they need to hand over to the videos. To specify those things.

Okay, I felt like we had a lot of this is when I was open. We've had.

That was really the first time we've had other people jump in and try to do what we've been doing. And we're in a hurry, so I don't know if we were taking notes like for PSI. Like every issue that you ran into, I don't know if we documented this is something that needs to go into a run book.

This is something that happened only because this is a brand new account to these workloads. Uh, this is lessons for about more Tech to heart than whatever we write or write a book. We need to stop being the doers, and we need to hand it off to other people after we've proven it out.

I don't know if we even have to go as far as build it. Make sure it works, destroy it immediately, ask somebody else to build it. That's right, a little too far. By that, you know, if we don't? Keep if we keep running into the same issues. I think it is time for us to try something different.

Sure, uh, so I think I, I need to update a few, uh, issues that I have faced, uh, into the Run books.

Speaker 2 07:00

I'll just add those. I'll update those front books. Okay, yeah, and I'd make sure.

Speaker 3 07:09

That you're giving those run books to JVS, he said. JBS and Mike is that who the people that, yeah, Jeff, yeah, that's what Jeff told me actually. Okay, yeah, all right.

Anything else before? But jump on the board and try to close some stuff out. I think that's probably where we're at.

All right.

How fast I can get zoom one screen?

A lot of H's and chains. What should?

All right, everybody.

Speaker 1 08:32

I don't know if this is going to be as effective as we normally are, but I was going to try to start closing out stuff. Who thinks they got the least amount of items on their board that we can get

through and close? Give me a pending approval. Yeah.

I got 15.

Speaker 3 08:54

Adam's got 33. I think most of them are in the dog called yeah. They are Adam's winning so far. Alex has got 22. Amanda's got 28, but 23 are in pending. Uh, Jackson's got two, but he's not here, right? Jim, I'm just probably going to close this out. Amanda, I don't think he's coming back.

Let's just park it.

I think we're also going to take this off of maduke's hands. I don't know Alex if we made it in time for auto simple lookup, so. I, that's something I want to talk to you about on, like? I'm doing it right now. Okay. Uh, that's what I've been working on when I can this morning.

I, we can definitely deploy the release with or without it, but. Gonna have it ready as fast as I can, and ask whoever it matters to by the time I wanted to do it before I left. Yeah, I'm close to having it done, but it's not done yet. And that's my bad, but um, I think I should have it today.

Um, yeah, I'm not at anywhere. If we want to take our time and do it right, not rush it. That's fine. Well, it shouldn't take that long to do it, right? I just, it's been hard to. I, it shouldn't be hard to get it together, and I think I can today so.

One thing that did concern me is, I think, uh, manahar added SSO into the version that he's got. You did, and I don't know if we've got the secrets requested. I don't know if we've got time to test it all. I don't know if it was like that. In QA, it was like that in QA.

Okay, uh, we do need to request some secrets and stuff. Still, I'm realizing now that you mentioned that, yeah, that's what I'm worried about. If you hit them up with where you think we're at, he can help you finish. Yeah, yeah, I've messed with.

I would be completely prepared to roll it back if it doesn't work out. Because I don't know that this was on qa's radar to test teams. Uh, my concern is, like, we turn on single song on, and we find that one application that's never been set up to call it with credentials, and now we just broke something in production, but anyway.

Go forward if I want, but well, I'll tell you what I mean. Those those concerns aside, I am trying to hurry and get it ready, uh, I don't. Yeah, I mean that all that stuff is. Valid points to make. I won't. I guess I'll say if you if I set this up and we find issues and stuff.

My feelings won't be hurt because I, we need to set this up. I need the operationalize setting this up, um. I want to write a one book on setting this up, and I'm doing those things so. Um. I think it's. There's there's this valuable work to happen this week anyway and.

Uh, yeah. But yeah, the fact that it was set up with all this and QA makes me helpful. It has been.

Yeah.

Yeah, I don't know. Like, right now, I don't even think

Speaker 1 12:30

We ever merged to this version into the main.

Speaker 3 12:33

So, no, we have not, and I'm I'm not. The work I'm working off is outside of the scope of that. I'm pretty much just doing what I did to clean mobile upload back into the current main Nevada symbol.

Speaker 1 12:46

Okay.

Speaker 3 12:49

I, I talked about that with that and stuff, and I mean, I, I'll obviously he'll be the reviewer on that PR when it goes back in. Time, hopefully either today or tomorrow. Um.

Yeah, uh, I think I think that. As far as like the local workspace enhancements and stuff like that, I think that that's all still at least somewhat in progress. I'll let him speak to that, obviously, but I, I don't think the two conflict and I think they can go in at separate times.

Essentially, is what I think we we came to. Um.

Amanda, didn't you already do this? Add Gradle documentation to the? Documentation repository. It's on his side. Do you care if I sign it, I do? Yeah, I did that last week. I, I used to have opened a story, and I did as well, oh. Yeah, I thought I did all right.

Let me pop up there. Yeah, I just named it something slightly different. It's three over nine. 309. Yeah, that's the one I use. And you did it right before I created mine. I picked document is a review standards. Okay. So I can say this one is duplicate.

Speaker 1 14:42

So you can close the tickets left and right?

They want to pick on CG because she has the least amount of tickets. Uh, pending approval.

Research, adopt maintenance practices. You got a pending approval?

Speaker 2 15:07

Do we have buy one ever done this yet? Huh, I've not done this yet. This is waiting on me. That's my bad. And I would. I will get on this today.

Speaker 1 15:27

I don't think there's urgency, Alex.

Speaker 2 15:29

It's just as long as it gets done. No, no, but she's been waiting on me for that at least all last week, so I hope gets. How to run data patches currently? We have a script request. Any updates on this one? Uh, and I'll stop working on it as soon as I finished the garage.

It's really fast for what is the definitions production? What are you doing in production?

Speaker 3 16:16

And say, after this, we need to get more people involved so that they can. Still working on that. I need to edit it.

Speaker 2 16:31

We cleared out your pending approval. Well, we gave it to the first time this one you already took care of, right?

Speaker 1 16:52

Yeah, I did work on it.

Speaker 2 17:06

You pick on sign. Next, deploy real-time insurance per account for performance testing. Can we consider that done? Yes, yes, it is done. Evaluate existing AWS accounts, so this one, yeah. I think. We got the emergency, which was where we put staging done. Yeah, you go ahead and ensure that you.

Create a ticket on csgt board and say, hey, this is what we're coming up with. I did. I don't know if it's come back to you all, but I did get feedback. Networking and security, wanting to be part of this conversation. When we were discussing this, Danny gave us that feedback.

Um, I can't remember if we've discussed this in front of plants or? Uh, Jackson, I thought we would have, but maybe we did. No, I, I don't think we did. This is regarding that the accounts. Yeah, oh gosh. Yeah. So I, I would just. Put a ticket on their board.

Um.

Although I don't know if Lance goes over there either. Definitely put a ticket on their board, saying, hey, we've created this. I wouldn't say this is the account standard, right?

Speaker 1 18:29

Like, this is more like, here's how we're going to map things like. Here is how we're going to put workloads into accounts exactly. Yeah.

Speaker 2 18:43

I'm sure they're gonna have feedback as well, but Sure.

Speaker 1 18:47

Do you have this document updated to a point where we could? I could shoot it over to Lance Jackson and Matt and say, hey, this is coming. To csgt. That way, they have an opportunity to review it, weigh in. Uh, the one that one that we discussed, uh, earlier.

Yeah,

Speaker 2 19:05

Ah, okay, uh, I didn't make changes actually, but I will just go through that today, and I will just update that document. Okay, like how we discussed, and then I can just create a ticket. Yeah.

Speaker 1 20:16

Giving them a heads up. And when you're done, just? Sure, and uh, just. Go ahead,

Speaker 2 20:24

Uh. So, just, uh, adding the document that we discussed and? Anything else do you want me to add for that? Like, any other document or anything? No, no. You're going to go to csgt and go over your document with them and say, here's what we've came up with, right?

Yep. And I expect conversation sure. I don't mean, like, I demand compensation. What I mean is as soon as you start getting into this, uh?

Speaker 1 20:53

If Danny is correct, they're going to go ahead and say, hey, look, we already did this. And here it is over here in this document, that's great. We just need to make sure that it's consumable, but uh, you know, I read through a lot of these things that AI found, and I could not find.

Speaker 2 21:08

A straightforward mapping and explanation for why something goes into whichever account.

Speaker 3 21:15

Yeah, I think Danny, uh, what he's referencing to. I think he may be misunderstood what we were

Speaker 1 21:21

Driving to. I agree with that. I think he's probably going to point to the account list. And I mean, it does have a description of the account there. Okay.

Speaker 2 21:30

But there's no decision tree or anything about. I've got this application and it's supposed to represent this environment. Which account do I put it in that. I don't think there's a decision tree or anything. I

Speaker 1 21:43

Agree, but we'd like that at least not like a focused like step by step. Like you could, you could probably read the descriptions and make those interpretations from the Atlas. But there's not like a direct. Walkthrough of the same way. I think this document attempts to be.

We'll Splash it, and then we'll get it published. Yep, I like the document. It was helpful to me sure. And this one, uh, I basically found a method.

Speaker 4 22:18

And I have documented that one, and I think we need to like go through that once before. I, I

just send that to Adam.

Speaker 2 22:29

Who do you think is involved? Do you think it's networking security or another Cloud engineer that needs to look through this, I think?

Security, I mean, networking. I don't think networking needs anything to do with this, because, uh, the method that I found it will be just for the we need to use IAM role.

I'm not sure if networking needs to locate this.

Let's do this. Sure. And do you want me to add a document here or or shall I just send that to them? Oh yeah. Do you instead of attaching them? Do you mind, I don't know?

Speaker 1 23:28

Uh, when documents are constantly changing and you attach them. Yeah, about a fan of that. I'd much rather you put it as a link to like your OneDrive so that people can edit it, and it will be a living document. Sure, you might want to do that. Yeah, got it.

All right, so same thing. Add time. And you, where are you at? Yeah. I link to a mod drives you produced. I do think we probably want another cloud engineer to review it. I don't know if we want to pick on Alex or if you want to give JBS a shot.

Sure. Sorry, let's start with security because they might shut the whole show down anyway.

As soon as you're done, just assignments in Jacks at our plans flip coin. If you want to pick who it goes, sure?

Speaker 2 24:34

I think yes, not nothing yet, uh? Just had a discussion with Daniel back then, and I just gave him the.

Speaker 3 24:47

Limitations of SNS, the data limitations, and after that, I didn't hear back from him. So, I'm just still waiting.

Speaker 1 24:59

Then, when you're bored, you're still having fun with this one, right? Exactly, yeah. Did we ever get any feedback for this one either because didn't? Didn't, uh Danny, have an opinion on what we were doing with this. Uh, so I actually.

Speaker 3 25:15

Marry ticket for the csqt to about the tax actually, and I didn't get a response from them. Where is?

By the way, our, uh? See. I don't know how much time you all want to spend with me. But I have the next hour free.

Speaker 1 25:46

Cloud manager checkpoint till tomorrow.

Oh, I was gonna keep going through this until 11, 30. If you all have time, stick around, if not understand, pop off the phone. Um, what is their board CCOE?

Spaces. That's probably the faster way. More spaces. It's a cloud scratching and coconuts, probably yeah.

Speaker 3 26:19

And you think, what do you think you had is? That as a task actually in? Let me just check the. Review and approve exactly. Yeah. All right.

Speaker 1 26:42

Who's in charge over there? I know Dan is going to have an.

Who else is over there? I can't even remember.

Oh yeah, uh, Mike and. Uh, Matt.

Be most concerned with this, but if I had Danny and I hit up Chris, that'll probably get their attention.

I'm gonna sign it. Gonna start it. To their fearless leader. Chris, who I think is on vacation? So, you'll definitely appreciate me.

Speaker 2 27:57

Giving him work when he's on vacation.

All right. I wanted to link it. Uh, the sort of button that says copy link. But there was one. Who's got these legs everywhere?

Speaker 1 28:27

Yeah. I just wanted to make sure that we.

Speaker 2 28:41

All right, anything else on your board, um? That's it actually!

So he's got zero zero.

Speaker 3 28:53

You almost got fuel zero to have mad zero down producable zero amount, zero down and talk to him. Amanda, you're the next person. I'll pick it on, and we're gonna be here all day, right?

Speaker 1 29:15

So some of these were are just like researching.

Speaker 4 29:19

Like, what is this and what's it do and documenting those things? I'm trying to open this unique tab, but? What is wrong with me?

Do you see the metal plate?
